PECUNIA PROM-MH COMPENDIUM
VERSION: 1.1, last update: 25 November 2025

The PECUNIA Patient-Reported Outcome Measure-Mental Health Compendium (**PECUNIA PROM-MH Compendium, v. 1.0, 4 Feb 2020**) is a Microsoft Excel®-based electronic library of non-disease-specific PROMs used in mental health research. It provides **metadata information about existing, publicly available generic PROMs** suitable for use in **(mental) health research** and their applicability in **multi-sectoral, multi-national and multi-person (economic) evaluations**. The PECUNIA PROM-MH Compendium v. 1.0 was developed by the Department of Health Economics, Center for Public Health, Medical University of Vienna as part of the Horizon 2020 research project PECUNIA (ProgrammE in Costing, resource use measurement and outcome valuation for Use in multi-sectoral National and International health economic evaluAtions - GA No 779292). In terms of outcome assessment, the project aimed for harmonisation in multi-national, multi-sectoral and (where relevant) multi-person economic evaluations by addressing cross-country variations in utility measurement and harmonising methods for broader wellbeing measurement, among others.

The **methodology** of deriving PROMs and their metadata included in the PROM-MH Compendium (v.1.0) followed a two-step process. Firstly, a **systematic literature review** was conducted on 4 Feburary 2020 in five bibliographic databases from January 2008 until February 2020 to identify relevant **non-disease-specific PROMs used in mental health research** for the measurement of quality of life/wellbeing, or recovery. Secondly, **secondary searches** in PubMed and Google were conducted to acquire the most up-to-date PROM metadata. Metadata information was searched in scientific articles, instrument manuals, and web-based sources (e.g. questionnaire websites).

The PECUNIA PROM-MH Compendium v. 1.0 consists of **204 unique instruments (PROMs)** alongside their comprehensive metadata and is browsable according to main PROM characteristics. The tab "PROMs (v. 1.0, 4 Feb 2020)" lists instruments in alphabetical order. The "Browse by Category (v. 1.0, 4 Feb 2020)" tab redirects users to the list of PROMs with desired characteristics. Each PROM identified in the systematic literature review (as of 4 Feb 2020) is described in detail in the separate worksheets.

Information about each instrument is organised in **five sections**:
1) BASIC CHARACTERISTICS (information on the year of publication, country (language) of origin, number of items, administration mode, other language versions, etc.)
2) SCORING (information on level-sum scoring, standardised scoring, weighted preference-based scoring, availability of preference-based value sets, availability of mapping studies, etc.)
3) AVAILABILITY OF VALIDATION STUDIES IN MENTAL HEALTH (information about the availability of validation studies for different mental health disorders)
4) APPLICATION IN MULTI-SECTORAL, MULTI-NATIONAL, MULTI-PERSON (ECONOMIC) EVALUATIONS (information on whether an instrument: i) has separate adult and child/adolescent versions available, ii) has a proxy-completion option available, iii) assesses outcomes beyond health-related quality of life, i.e. capabilities, iv) has multiple language versions available, v) has a preference-based value set available, and vi) has a preference-based value set available in more than one country)
5) OTHER (link to the manual and terms of use, if available for the specific instrument).

The PECUNIA PROM-MH Compendium update (v. 1.1) compiled in November 2025, incorporates findings from a systematic literature review update conducted on 21 September 2023, which covered the period from February 2020 to September 2023. The review identified additional PROMs as of 21 September 2023, which are listed in the "PROMs update (v.1.1)" tab. The update also included specific information on instruments available in German, which is available in the new "German versions" tab.

15D

15D instrument of health-related quality of life

A generic, comprehensive (15-dimensional), self-administered instrument for measuring health-related quality of life among adults (age 16+ years)

Date of meta-data: 3 Apr 2020

BASIC CHARACTERISTICS		References
Year of first publication	1993	Sintonen H, Pekurinen M (1993) A fifteen-dimensional measure of health-related quality of life (15D) and its applications. In Walker SR, Rosser RM, eds. Quality of life assessment: Key issues in the 1990s. Dordrecht: Kluwer Academic Publishers (pp 185-195)
Country of origin (language)	Finland	
Link to sample questionnaire		http://www.15d-instrument.net/site/assets/files/1002/15d_englis
Main category of outcome measurement	QOL/Well-being	
Sub-category of outcome measurement	HRQoL	
Generic/Mental health specific	Generic	
Target age group	Adults	
No. of items	15	
Levels of answers	5	
Approximate time to complete	5 min	
Domains covered	Mobility, vision, hearing, breathing, sleeping, eating, speech, elimination, usual activities, mental function, discomfort, depression, distress, vitality and sexual activity	
Standard recall period	Day of completion	
Person completing instrument	Self-reported, Proxy-reported, Interviewer-	
Modes of administration	Paper-based, Computer-based	http://www.15d-instrument.net/15d/
Belongs to the family of instruments	15D	
Related instruments	16D	
	17D	
Other language versions available	Yes	
Approximate no. of known translations	32	http://www.15d-instrument.net/15d/languages/: Arabic, Bulgarian, Catalan, Chinese, Czech, Danish, Dutch, English, Estonian, Finnish, French, German, Greek, Hebrew, Hungarian, Icelandic, Italian, Japanese, Lithuanian, Malay, Norwegian, Polish, Portuguese, Russian, Serbian, Somalian, Spanish, Swahili, Swedish,

SCORING		
Answer scale	Likert scale	
Level-sum scoring (min-max)	Not known	
Standardised scoring (min-max)	Not known	
Weighted preference-based scoring	Yes; The single index score (15D score) on a 0-1	
Approximate number of preference-based value sets	3	Finland https://doi.org/10.3109/07853890109002086. Denmark https://www.sdu.dk/-/media/files/om_sdu/centre/cohere/working+pap
Technique of valuation	VAS	
Availability of mapping studies	Yes	
Approximate number of mapping studies	12	EQ-5D-5L, SF-6D, HUI-3, QWB, AQoL-8D, DASS-21, K10, D-39, FIQR, MacNew, AQLQ-S, EORTC QLQ C30 https://doi.org/10.1177/0272989X15578127.

AVAILABILITY OF VALIDATION		
Validation in mental health diseases	Not known	
Approximate number of mental health disease areas	Not known	

APPLICATION IN MULTI-SECTORAL, MULTI-NATIONAL, MULTI-PERSON (ECONOMIC) EVALUATIONS

Availability of separate adult and child/adolescents versions	Y	
Availability of a proxy-completion option	Y	

AC-QoL

Adult Carer Quality of Life

A questionnaire designed to exhaustively evaluate caregivers' experience, and capture both positive and negative aspects of caring covering eight dimensions

Date of meta-data: 18 May 2020

BASIC CHARACTERISTICS		References
Year of first publication	2010	https://doi.org/10.1108/13619321211270380
Country of origin (language)	UK	
Link to sample questionnaire		https://www.emerald.com/insight/content/doi/10.1108/13619321211270380/full/html
Main category of outcome measurement	QOL/Well-being	
Sub-category of outcome measurement	Care-related quality of life	
Generic/Mental health specific	Generic	
Target age group	Adults	
No. of items	40	
Levels of answers	4	
Approximate time to complete	10 min	
Domains covered	Environmental aspects, represented by social support and financial resources; perceived burden, evaluated as stress and limitations in freedom and choices; caring related benefits, including personal growth, the feeling of being valued and appreciated by the care recipient, skills and competences, and satisfaction with caring	
Standard recall period	Past 2 weeks	
Person completing instrument	Self-reported	
Modes of administration	Paper-based	
Belongs to the family of instruments	Not applicable	
Other language versions available	Yes	
Approximate no. of known translations	3	Italian, Chinese, Korean

SCORING		
Answer scale	Likert scale	
Level-sum scoring (min-max)	Total scores range between 0 and 120. Low quality of life corresponds to 0–40 scores, mid-range quality of life to 41–80, and high quality of life to scores higher than 80	
Standardised scoring (min-max)	Not known	
Weighted preference-based scoring	No	
Approximate number of preference-based value	Not applicable	
Technique of valuation	Not applicable	
Availability of mapping studies	Not known	
Approximate number of mapping studies	Not applicable	

AVAILABILITY OF VALIDATION		
Validation in mental health diseases	Yes	
Approximate number of mental health disease areas	2	Carers of children with mental and behavioural disorders https://doi.org/10.1080/09638288.2017.1423519; Carers of people with mental health difficulties

APPLICATION IN MULTI-SECTORAL, MULTI-NATIONAL, MULTI-PERSON (ECONOMIC) EVALUATIONS		
Availability of separate adult and child/adolescents versions	N
